The Chinese economy is significantly affected by the global financial crisis due to the export oriented nature of the economy which depends heavily upon international trade. The large size of China means there are major regional variations in living standards that can vary from extreme poverty to relative prosperity. The Washington Post.

Although China's economy in was three times its size; this was not an impressive. Consequently, supply curves shifted in accordance with the FYEP, but the output was of inferior quality resulting, in some cases, in a negative impact on product demand and there was no real attempt to match supplies with existing demand which is not simply a quantitative measure for products. Past nuclear research by the ROC makes it a 'threshold' nuclear state.

Fairly significant economic growth in was wiped out by the Cultural Revolution. prices did not change when production costs or demand for a commodity altered, they often failed to reflect the true values of goods causing many kinds of goods to be misallocated and producing a price system that the Chinese government itself referred to as "irrational. Communist party officials

took the pre-revolutionary strategy of insinuating themselves into village life a step further after the revolution.
